PROFESSIONAL SUMMARY

Fullstack Engineer with 4+ years of experience building scalable web applications using React, Next.js, TypeScript, Node.js, PostgreSQL, and cloud platforms. Experienced in frontend architecture, API development, authentication systems, payment integrations, and AI-powered applications. Proven track record delivering production software for startups and agencies, improving performance, accessibility, and user experience while owning products from concept through deployment.

CORE SKILLS AND TECHNOLOGIES

Languages: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Material UI, ShadCN/UI, Redux Toolkit, React Query, Zustand, Responsive Design, Accessibility (WCAG), SEO, Web Performance Optimization

Frontend: React, Next.js (App Router, SSR/ISR, Server Components), Tailwind CSS, ShadCN, Material UI, Redux / React Query

Backend & Databases: : Node.js, Express.js, REST APIs, GraphQL, FastAPI, WebSockets, Authentication, API Design, Server-Side Rendering (SSR), PostgreSQL, MongoDB, MySQL, Redis,

Cloud & DevOps: AWS, Vercel, Docker, CI/CD (GitHub Actions), Railway, Render, DigitalOcean

Auth & Payments: JWT, OAuth, NextAuth / Clerk, Stripe

Testing: Vitest, Jest, React Testing Library, Playwright, End-to-End Testing

Practices: System design, performance optimization, testing, accessibility, code quality (ESLint, SonarQube), Responsive Design, Cross-browser Compatibility, Frontend Architecture, State Management, Component Libraries, Progressive Web Apps

AI ENGINEERING & WORKFLOW

Build AI-powered applications with OpenAI and Gemini APIs — prompt engineering, function/tool calling, streaming responses, structured outputs, and cost-aware integration — plus RAG architectures using embeddings and vector search (pgvector, Pinecone) for grounded, context-aware experiences. Remote-first and async: take features from ambiguous brief to production with TypeScript, automated testing, CI, and post-release monitoring, collaborating across product, design, and backend with a focus on clean architecture, accessibility, and measurable UX. Use AI-assisted tooling (Cursor, GitHub Copilot, Claude Code) to accelerate delivery, refactoring, and debugging without trading away code quality.

PROFESSIONAL EXPERIENCE

Frontend Engineer — DAXAP AS

June 2025 – May 2026

Shipped production features for two multilingual civic-tech platforms — Kiddy (parent–institution communication) and Vibori (community engagement) — serving non-native-speaking and immigrant communities across Norway.

- Built and shipped production features using React, Next.js, TypeScript, React Query, and Tailwind CSS across both applications.
- Engineered the multilingual layer (i18n with react-i18next) powering in-app translation across 10 languages — a core feature that, per an independent SINTEF study, helped 83% of parents receive information they otherwise couldn't understand
- Improved Core Web Vitals on key flows, reducing load times on low-end mobile devices through code-splitting and route-level lazy loading
- Raised accessibility to WCAG AA on primary user journeys (keyboard navigation, screen-reader labels, color contrast), making the apps usable for a deliberately broad, non-technical audience

- Built real-time notification and update features (push messaging, activity feeds) enabling institutions to reach parents instantly — part of a product 77% of surveyed parents said meaningfully improved communication
- Implemented Vibori's event calendar with category filtering, organization-follow subscriptions, and Google Maps integration for discovering nearby local events

Software Engineer — T40 Technologies

January 2024 – June 2025

Core frontend engineer on intercity.ng — a travel-tech marketplace for booking bus/car tickets, parcels, and charters across 100+ Nigerian transport operators, with companion iOS/Android apps.

- Designed and shipped multiple customer-facing product verticals end to end — ticket search & booking, parcel/waybill delivery, vehicle charter, reviews, and community — in React/Next.js and TypeScript, each owned from design handoff to production
- Built the multi-step booking funnel (search → compare operators → passenger details → payment → ticket issuance), one of the highest-traffic flows on the platform
- Integrated Paystack, Monnify, and Nomba payments alongside operator/ticketing APIs across 100+ transport partners, handling real-money transactions with idempotent payment handling and graceful failure states
- Improved Core Web Vitals across key pages via Next.js image optimization, code-splitting, and route-level lazy loading — critical for users on low-bandwidth mobile connections
- Built a reusable, accessible component system used across multiple pages and both web and in-app webviews, keeping the multi-product UI consistent and speeding up new feature delivery

Freelance & Contract Engineering

2022 – Present

Alparithm Investments, IAB Codes, Dijix Global Solutions, and independent clients.

- Delivered 10+ production applications across fintech, AI, SaaS, logistics, and productivity sectors using React, Next.js, Node.js, PostgreSQL, and cloud infrastructure.
- Implemented JWT/OAuth authentication, CI/CD with Docker, and deployments on AWS, Vercel, Railway
- Built reusable, responsive component systems with cross-browser and mobile compatibility, collaborating with cross-functional teams through code reviews and agile workflows

SELECTED PROJECTS

Fathom UI — Accessible, published React component library

Built with React, TypeScript, Vitest, Storybook, NPM, Radix UI [Live](#) | [GitHub](#)

- An open-source React component library published to npm (@engrayer/fathom-ui). Headless behavior from Radix, themeable through CSS-variable design tokens (light/dark), shipped as tree-shakeable ESM + CJS with type definitions. Every component is unit- and accessibility-tested (Vitest + jest-axe), documented in Storybook, and released through a tsup build with CI.

NutriMind AI — AI Nutrition & Wellness SaaS

Built with Next.js, TypeScript, Supabase, Google Gemini, Cloudinary, Recharts, Docker, CI/CD [Live](#) | [GitHub](#)

- Full-stack AI SaaS generating personalized 7-day meal plans, macro tracking with analytics dashboards (Recharts), AI workout plans, and a 24/7 conversational health assistant, backed by Supabase auth and storage
- Built a multimodal “fridge scan” feature using Gemini vision to identify ingredients from a photo and generate tailored meal suggestions

DocuPilot AI — AI Document Automation SaaS

Built with Next.js, TypeScript, Supabase, Google Gemini, Stripe, Docker, CI/CD [Live](#) | [GitHub](#)

- AI SaaS that generates, edits, exports, and shares professional documents (resumes, cover letters, proposals, contracts) via Gemini, with Supabase auth and Stripe-based subscription billing

Codraft — Real-Time Collaborative Document Editor

Built with Next.js, TypeScript, Liveblocks, Clerk, Sentry, Docker, CI/CD [Live](#) | [GitHub](#)

- Collaborative editor with live presence and low-latency concurrent editing (Liveblocks), secure document sharing and permissions via Clerk auth, and release/error monitoring via Sentry

EDUCATION

B.Eng. Civil Engineering · Abubakar Tafawa Balewa University, Bauchi

2016 – 2021

Graduated with 4.16 CGPA (First Class).

ACHIEVEMENTS

- Built and shipped production applications used across Nigeria and Norway
- Implemented multilingual experiences supporting 10+ languages
- Improved Core Web Vitals and accessibility across multiple large-scale applications
- Delivered AI-powered SaaS products leveraging OpenAI and Google Gemini
- Integrated payment systems including Stripe, Paystack, Monnify, and Nomba
